## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims**:

1. (currently amended) A real-time monitoring apparatus for biochemical reaction, which comprises:

a temperature control block comprising a thermoelectric element (2) capable of supplying heat into reaction tubes and a heat transmission block (3) which transmit the heat to the reaction tubes;

a light irradiation source comprising a lamp (5) which irradiates light with uniform intensity to sample contained in the reaction tube, a condensing lens and the optical waveguide (8) which has a facet shape to be fitted with that of a reaction tube plate (34); and

an optical system comprising receiving part for receiving fluorescence irradiated from the sample by the light emitted from the light irradiation source.

- 2. (currently amended) The real-time monitoring apparatus according to claim 1, wherein the lamp (5) includes a first ellipsoidal reflecting mirror or a parabolic mirror.
- 3. (original) The real-time monitoring apparatus according to claim 1, wherein the refractive index of medium of the optical waveguide is 1.35.about.2.0.
- 4. (original) The real-time monitoring apparatus according to claim 1, wherein the optical waveguide has a rectangular shape.
- 5. (original) The real-time monitoring apparatus according to claim 1, wherein the optical waveguide has a round shape.

## Claims 6-10 (cancelled)

11. (currently amended) A real-time monitoring apparatus for biochemical reaction, which comprises:

a temperature control block comprising a thermoelectric element (2) capable of supplying heat into reaction tube, and a heat transmission block (3) which transmit the heat to the reaction tubes containing sample;

a light irradiation source comprising a lamp (5) which irradiates light with uniform intensity to sample contained in the reaction tube, a condensing lens and the optical waveguide (8) which has a facet shape to be fitted with that of a reaction tube plate (34); and

an optical system comprising a light receiving part for receiving fluorescence generated by the light irradiated from the light source and a second reflecting mirror (11) which alters light path.

- 12. (currently amended) The real-time monitoring apparatus according to claim 11, which comprises two or more the second reflecting [[in]] mirror (11) which alters light path.
- 13. (original) The real-time monitoring apparatus according to claim 11, wherein the lamp (5) comprises an ellipsoidal mirror.
- 14. (original) The real-time monitoring apparatus according to claim 11, wherein the refractive index of medium of the optical waveguide (8) is 1.35.about.2.0.
- 15. (original) The real-time monitoring apparatus according to claim 11, wherein the optical waveguide (8) has rectangular shape.

Appl. No. 10/551,784 Attorney Docket No. 27024U Response pursuant to RCE to Office Action mailed May 21, 2009

- 16. (previously presented) The real-time monitoring apparatus according to claim 11, wherein the optical waveguide has round shape.
- 17. (new) The real-time monitoring apparatus according to claim 2, wherein the lamp including a ellipsoidal reflecting mirror further comprises a focusing lens.
